Print Management System

Project Description:

print management system is a system where people can easily print their documents using the website. It is a hassle-free print System. Usually, when we want to print a document we need to send the file to email or pen drive or any cloud storage. But in our system people just scan the qr code to print a document. This system is easy and securely.

Main functionalities:

register and login for User1:

First people have to register on our website. After successful registration they will login and save their desired files on our server. Then from there they will select the required files for printing.

register and login for User2:

*First the shop owner or those who have printer have to register on our website. After successful registration they will login . Then from there they will find **Pint file** option here the user1 give their credential or scan and print their file.*

User1:

*User1 can show the amount of printing file and their price. They can show their profile and also edit their profile. In profile section they have a **qr code** for easy login to print their file from the shop.*

User2:

User2 can show the amount of total printing file they printed and their total price. They can show their profile and also edit their profile. In Print info section user2 can see the people info as people print their file from user2.

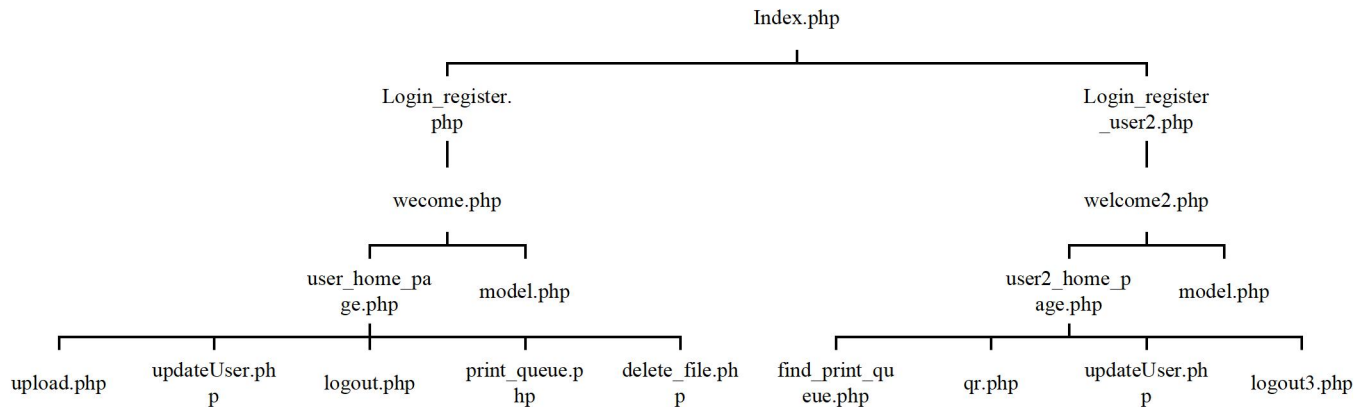

Admin:

*Admin can show number of the total **user**, total **save file**, the amount of total **printing file** , the total **price** . Also can show the whole information about the **user1** and **user2**.*

Print Management System
